

'Jeep' Universal

Available with optional
Dauntless V-6 160 h.p. Engine

'Jeep' Universal . . . One of the "UNSTOPPABLES"

World-famed 'Jeep' dependability in the Universal Series comes in a wide range of versatile models. Choose from CJ-5 and CJ-6 4-wheel drive models and DJ-5 and DJ-6 2-wheel drive models, 81 or 101 inch wheelbases and a variety of body enclosures and seat combinations. And you can also select a high-performance engine!

'JEEP' DAUNTLESS V-6 . . . THE MOST POWERFUL ENGINE OF ANY VEHICLE IN THE UNIVERSAL'S SIZE AND WEIGHT CLASS!

Get more hustle on the highway—more muscle off the road! Dauntless V-6 spirit comes on strong to provide faster acceleration and quicker going . . . cruise at top turnpike speeds with a reserve of power to meet any driving situation. With its 160 horses and 225 cubic inches of displacement, the Dauntless offers plenty of spirit off the road, too. Torque peaks quickly to give you greater go-ability in deep snow, sand or mud. Yet, the Dauntless' 90° "V" head permits more economical intake manifolding and improved regular-grade gas mileage! Wedge-shaped combustion chambers allow more complete combustion, and full-pressure lubrication, rotating valves, positive crankcase ventilation and a deep skirt block add long engine life to the Universal's traditional durability. If you haven't yet experienced the brisk performance and sensible economy of a Dauntless V-6, you're in store for a real treat!

'JEEP' HURRICANE

Providing rugged dependability you don't usually find in a 4-cylinder engine, the 75 horsepower 'Jeep' Hurricane matches many construction features of sixes and eights . . . features such as rotating exhaust valves, cast-in-head intake manifolding, and aluminum alloy pistons. For above average fuel economy, the Hurricane's "F" head design puts the intake valves in the head and exhaust valves in the block . . . permits better engine breathing and water-jacketed cylinders. 'Jeep' Hurricane—use tested, abuse tested over millions of service miles!

'Jeep' 4-wheel drive puts driving traction at all four wheels . . . provides safer going over wet, slippery roads—lets you drive over rutted trails and job sites where there are no roads. With its high ground clearance and short front and rear overhang, the Universal can pass over off-road obstacles and drive over hilly terrain. Four-wheel drive also provides for power take-offs to facilitate snow plows, winches, and many other equipment items. Payloads range up to 1564 pounds.

The Universal is tough! It carries up to six people or big loads, pulls heavy boats and trailers, and drives into the backcountry where fishing, hunting and camping are best. 'Jeep' 4-wheel drive lets you go up and down steep hills more safely . . . drive over slippery and muddy trails with less chance of fishtailing or bogging down. And with Dauntless V-6 power, the Universal delivers quick performance on the highway, too.

New driver's seat in the 'Jeep' Universal offers plush new comfort. Yet, it's durable and easy to keep clean. Matching front passenger's bucket seat and rear seat also available . . . or choose from front and rear bench-type seats. All seats can be quickly removed for extra cargo requirements and easily reinstalled for passenger accommodation.

In its 2-wheel drive version, the 'Jeep' Universal is an ideal, economical family "runabout". Its low cost makes the Universal easy to afford. The 'Jeep' Universal is also used by retail stores, government agencies and as a vacation resort car. Convertible top, full or half fabric top and full or half metal cab are available.

An All-Weather, All-Terrain Vehicle... With the Features to Prove It!

- 1. STEERING.** Quick 'Jeep' cam and lever steering and the Universal's low curb weight make maneuvering in traffic and around off-road obstacles easy.
- 2. TIRES.** The Universal has up to three times the optional tire sizes of competitive vehicles, offering tire types and sizes for all terrains.
- 3. FRAME.** Five crossmembers (plus a rear "K" member with 4WD models) and extra thick side members provide the 'Jeep' Universal with a strong, protective frame.
- 4. SUSPENSION.** Since rugged axles and suspension are standard equipment, you won't normally have to pay extra for heavy - duty components — even if you want a winch installed!
- 5. BRAKES.** Self adjusting brakes with bonded linings are standard with all Universals. A transmission brake (practically a "must" for off-road vehicles) is also standard with 4WD models.
- 6. SEATS.** Vinyl bucket seats are constructed of deep molded foam rubber and firm bolsters. They provide great new comfort and inches more headroom! Standard driver's seat is adjustable. Variety of seat combinations — and tops — also available.
- 7. WINDSHIELD.** High penetration-resistant windshield glass provides added safety.
